

EcoDry™

The porcelain toilet for
the holiday home!

- Dry ceramic toilet
- Odorless and dry waste
- Water flushing possible!
- Urine diverting

EcoDry™

Genuine Eco-toilet with easy recycling.

The most ecological toilet on the market.

Every part of EcoDry™ is designed for maximum comfort and environmental friendliness. Since the urine is separated in the front, the feces gets very dry and perfect for composting. Urine is mixed with water and used as a nutrient. After the fecalities have Composted for a minimum of 12 months, they are ready to be used as fertilizer.

The only dry ceramic toilet that makes it feel like home!

> Ceramic is the only material that stays fresh for many years!

EcoDry is the most durable toilet for rural houses, cottages and island home owners. Since its entirely made of porcelain, it has a very similar feeling of a regular toilet. The ceramic keeps it fresh and hygienic for many more years than plastic and other materials.

Urine separation and possible with water flush!

Urine separation makes it possible to get completely odorless waste and to use the urine as fertilizer. There is also a unique water trap inside the urine bowl that prevents odors. For maximum comfort, there is an optional water flush possible in the urine bowl.

> Invisible odorless waste

With a black 200mm pipe (polyetylen) mounted below the EcoDry the waste is invisible from above (The polyetylen pipe has a surface where dirt doesn't stick.) On the container below the floor a fan is mounted that dries the feces partially out and makes the feces after while very dry and makes 80-100 litres of feces to weigh only 10-20 kilograms when its time to empty the container.

EcoDry™ BOX

Wostmans complete solution with the black BOX is the perfect and smooth solution. The BOX contains about 100 Liter of space and has a fan mounted on the top for good ventilation and to make the feces even more dry. The emptying of the BOX is made from the outside/under the house. Approx 3 months emptying interval.

Many possibilities with EcoDry™

EcoDry™ can be used with many different collection devices such as composting chambers or completely customized solutions. It is recommended to have a fan you want to dry out the waste. If you already have an old solution, you can often switch to an EcoDry - an easy way to get a much higher standard.
